Education

Aligarh Muslim University

B.Tech. in Computer Engineering, CGPA: 8.21/10

Aug. 2023 – May 2027 (Expected)

Aligarh, UP

Aligarh Muslim University

Diploma in Computer Engineering, CGPA: 9.66/10

Aug. 2020 – Jun. 2023

Aligarh, UP

Publications

Decoupled Dual-Phase Network for Multispectral Fusion – NPDSM 2026 (Springer - LNME, MANIT Bhopal)

Robustness-Fairness Gap in Facial Recognition Architectures Under Stressors – IC3AI 2026 (IEEE, NIT Jalandhar)

Experience

Bodhi Hub

Jul. 2026 – Aug. 2026

AI Intern (Hybrid)

Punjab

- Built the anti-hallucination architecture for an LLM-driven Verra VCS v5.0 audit-automation agent: all regulated numeric calculations run in an isolated, AI-free domain layer, and generated narrative text is rejected outright if it contains a digit.
- Designed a RAG index that strips quantities before indexing, so the model has nothing to copy a numeric value from out of a past client report.
- Shipped the system with **956 backend** and **51 frontend** tests passing, on a FastAPI + PostgreSQL/pgvector.

RV University (RVU)

Jun. 2026 – Jul. 2026

Software & AI Systems Intern (Concurrent, Remote)

Bengaluru, Karnataka

- Architected an automated, zero-cloud security telemetry parser and Causal Graph Engine (NetworkX), reducing OS log processing volume by $\geq 80\%$ and accelerating downstream anomaly triaging.
- Built an enterprise-grade local Retrieval-Augmented Generation (RAG) pipeline utilizing Qdrant vector database and Ollama/Mistral-7B to automatically synthesize structured incident reports.
- Engineered high-throughput asynchronous data pipelines to ingest, validate, and normalize cross-system audit logs.

Maulana Azad National Institute of Technology (MANIT)

Jun. 2026

Deep Learning & Optimization Intern

Bhopal, MP

- Engineered an ultra-efficient **~118K**-parameter deep learning pipeline achieving real-time inference at **238 FPS** and **31 dB** PSNR for resource-constrained production environments.
- Implemented an Inverse-Attention Gating Mask mechanism to dynamically route and filter corrupted pixel streams.

Projects

autoheal-sre — Self-Healing Code Repair Agent | Python, FastAPI, LangGraph, tree-sitter, ChromaDB,

Docker, PyGithub, Groq

- Architected a repair agent that locates relevant code via a tree-sitter AST call graph and Chroma vector retrieval, instead of naive text chunking that splits functions mid-body and loses call relationships.
- Orchestrated a 4-node LangGraph loop (diagnose $\rightarrow$ plan $\rightarrow$ code $\rightarrow$ verify) that runs every proposed patch inside a network-isolated, memory-capped Docker sandbox and feeds real stderr back into the loop on failure, up to 3 retries, before any fix is trusted.
- Opens a pull request via PyGithub only once the sandboxed test run passes; measured pass@1/pass@3 of **6/15** and **11/15** on a **15-bug** hand-seeded evaluation set across four bug categories.

Other work:

- explainable fraud-risk classifier(xai-fraud-detection)
- cross-lingual Hindi/Bengali climate-stance NLP system(cross-lingual-stance-detection), selected — AISoMe 2026 hackathon.

Technical Skills

Languages: Python, C/C++, SQL, HTML5/CSS3

AI/ML: PyTorch, scikit-learn, Hugging Face Transformers, class-imbalance handling, explainable AI (XAI)

LLM & Agentic Systems: LangGraph (multi-agent orchestration), LangChain, RAG (ChromaDB, Qdrant), Ollama/Mistral-7B, prompt engineering, hallucination auditing/guardrails

Infra & Tools: Docker, FastAPI, PostgreSQL/pgvector, Git/GitHub, tree-sitter, PyGithub

Certifications & Languages

Certifications: Machine Learning Specialization (DeepLearning.AI & Stanford Univ., Andrew Ng)

Workshops: Applied Use Cases of AI Tools in Smart Manufacturing – MANIT Bhopal (Jun. 2026)

Languages: English (Fluent), Hindi (Native), German (A2)
